

**Ultra-Low Binding Culture Plate (24-well)  
(ULBCP-24)  
Catalog #0383**

**Product Description**

The Ultra-Low Binding Culture Plates prevent cell attachment by providing a neutrally charged, hydrophilic surface. Each plate is specially treated with a hydrogel that is animal-component free, inert and biocompatible. These plates are useful for the cultures of human mammary stem cells, mammospheres, progenitor cells, neural stem cells, and neurospheres. Additionally, these plates support the efficient formation of three-dimensional (3D) spheroids, such as embryoid body, tumorspheres in cancer research, and the 3D primary spheroids in regenerative medicines.

**Components**

0383 includes one 24-well ultra-low binding culture plate. Each plate comes individually wrapped and sterile.

**Product Use**

ULBCP-24 well are for research use only. It is not approved for human or animal use, or for application in *in vitro* diagnostic procedures.

**Storage**

Store at room temperature.

**Shipping**

Room temperature.
